

Project Cycle Management

“What's the point in running on the wrong path?”
(German proverb)

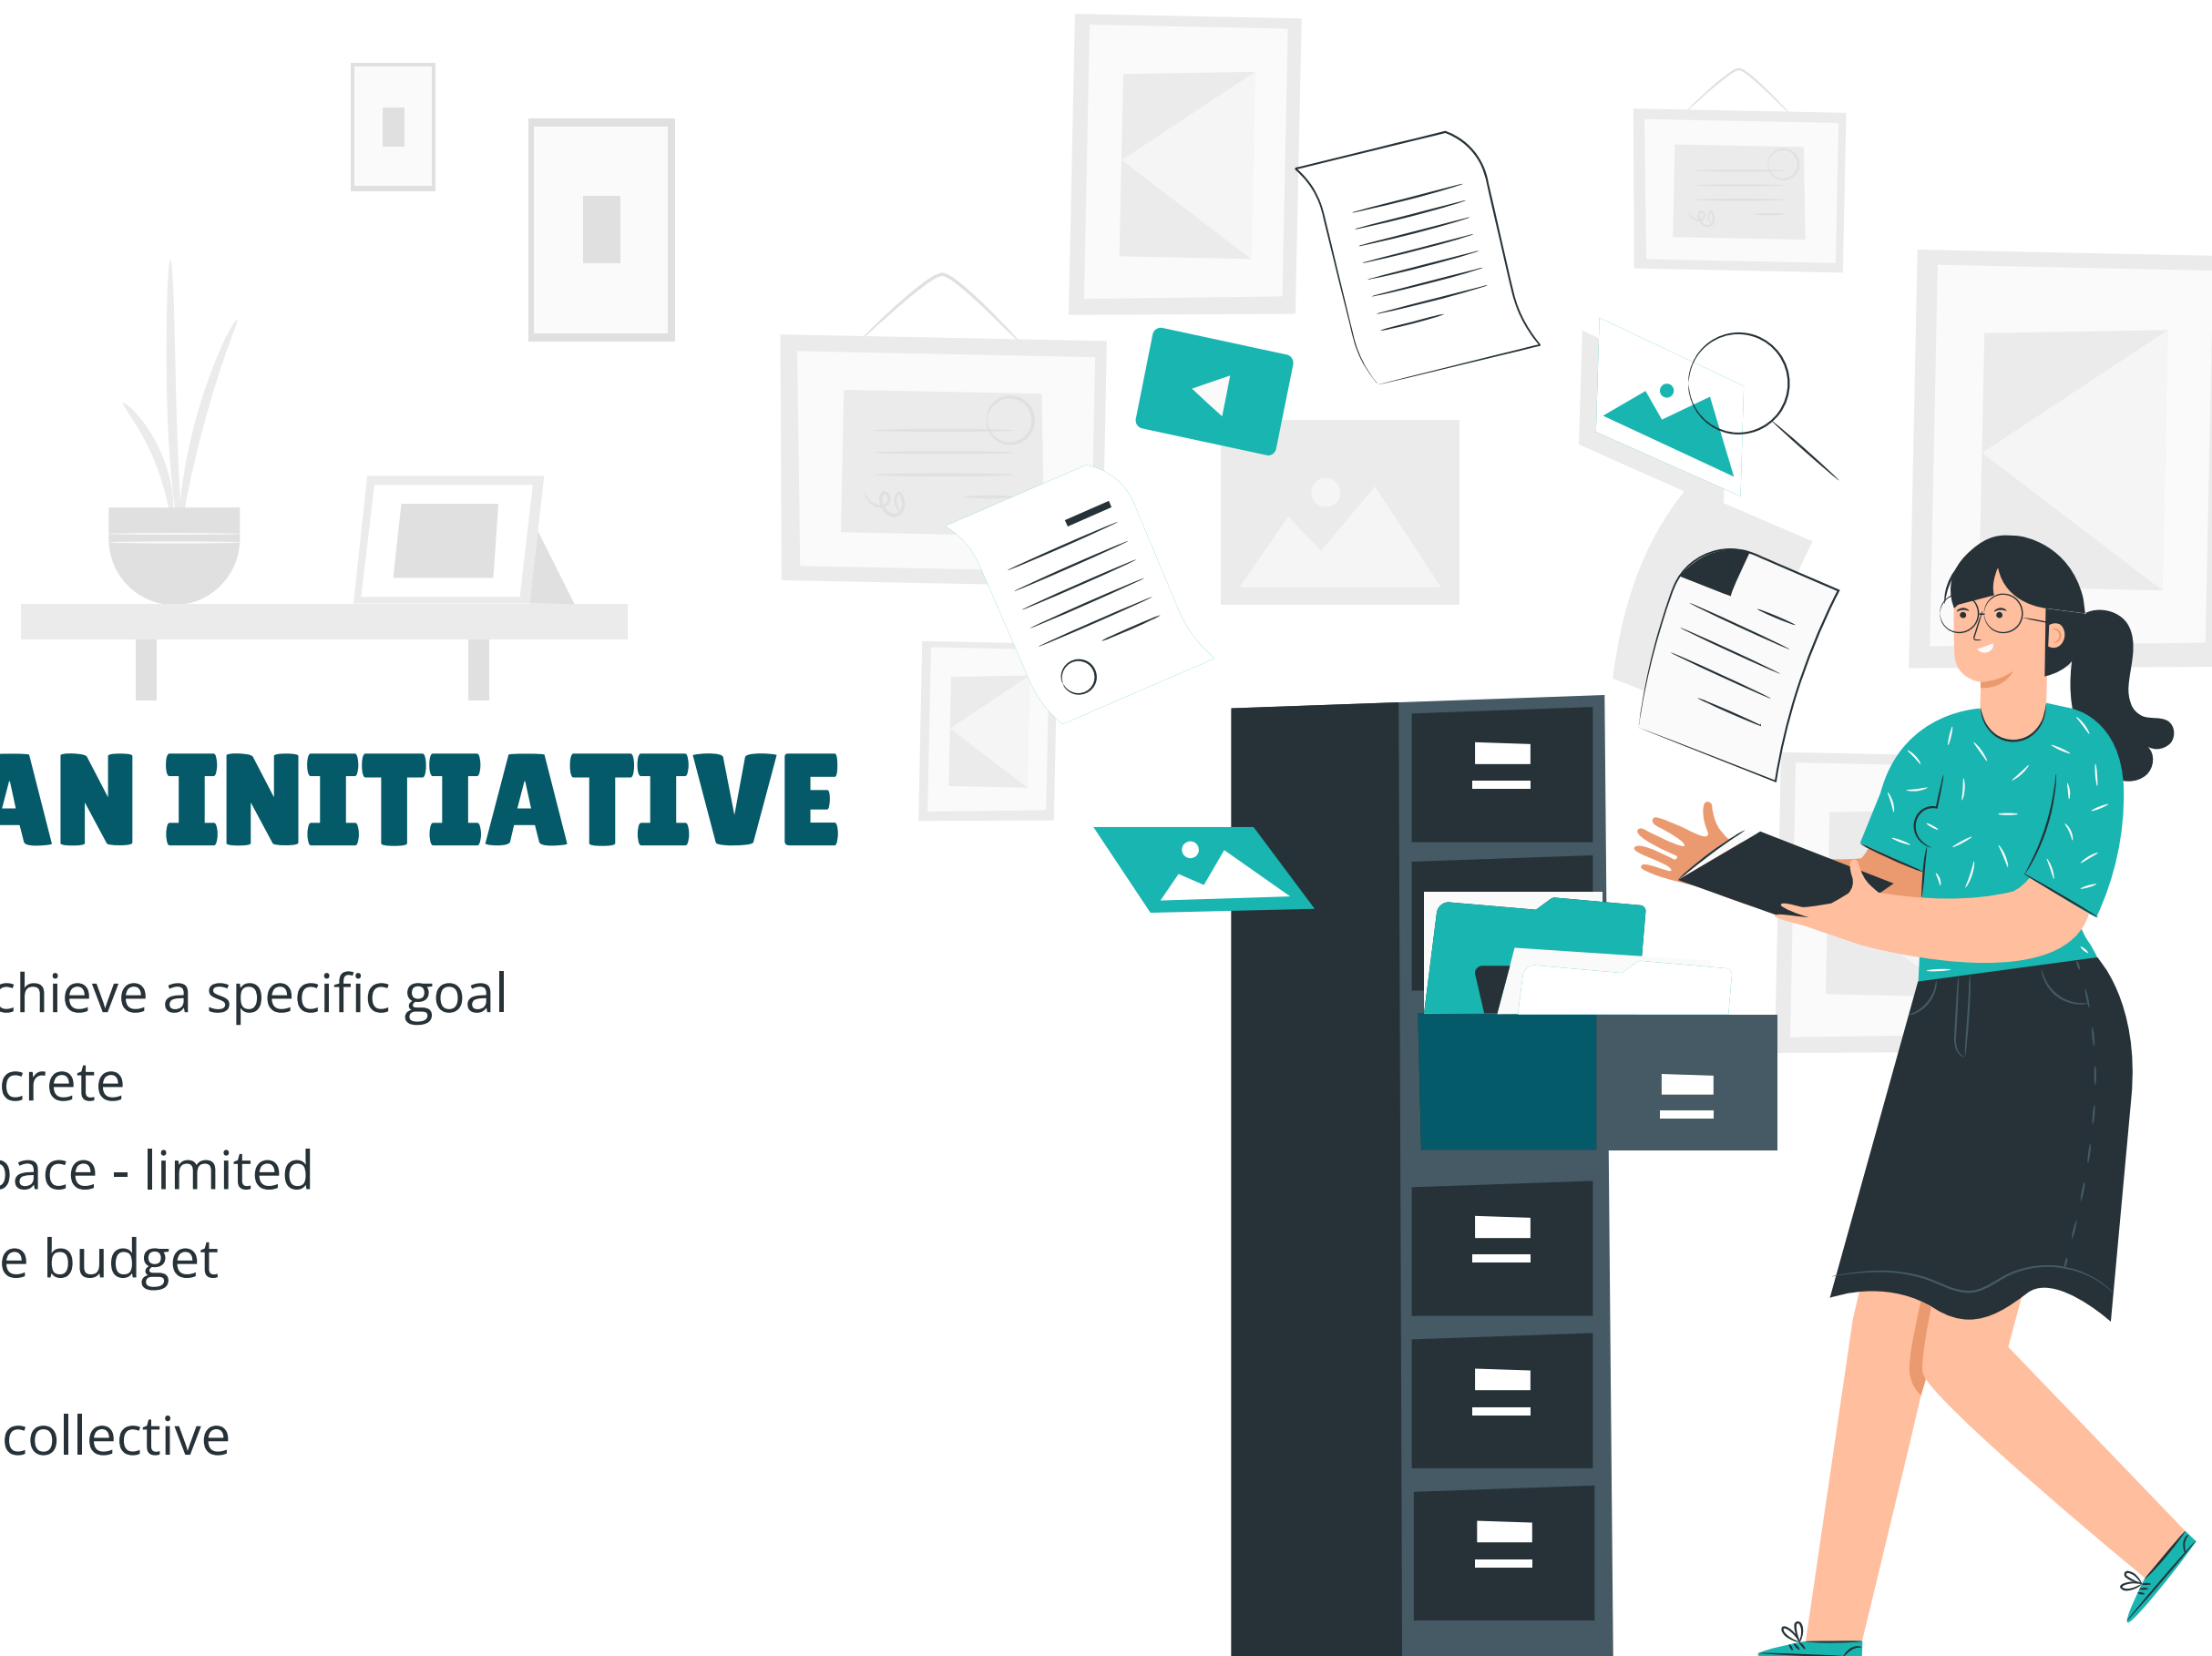

What is a Project? And what are the different phases of a Project?

IT IS AN INITIATIVE

- Planned to achieve a specific goal
- Realistic, concrete
- Time - and space - limited
- With a precise budget
- Complex
- Individual or collective

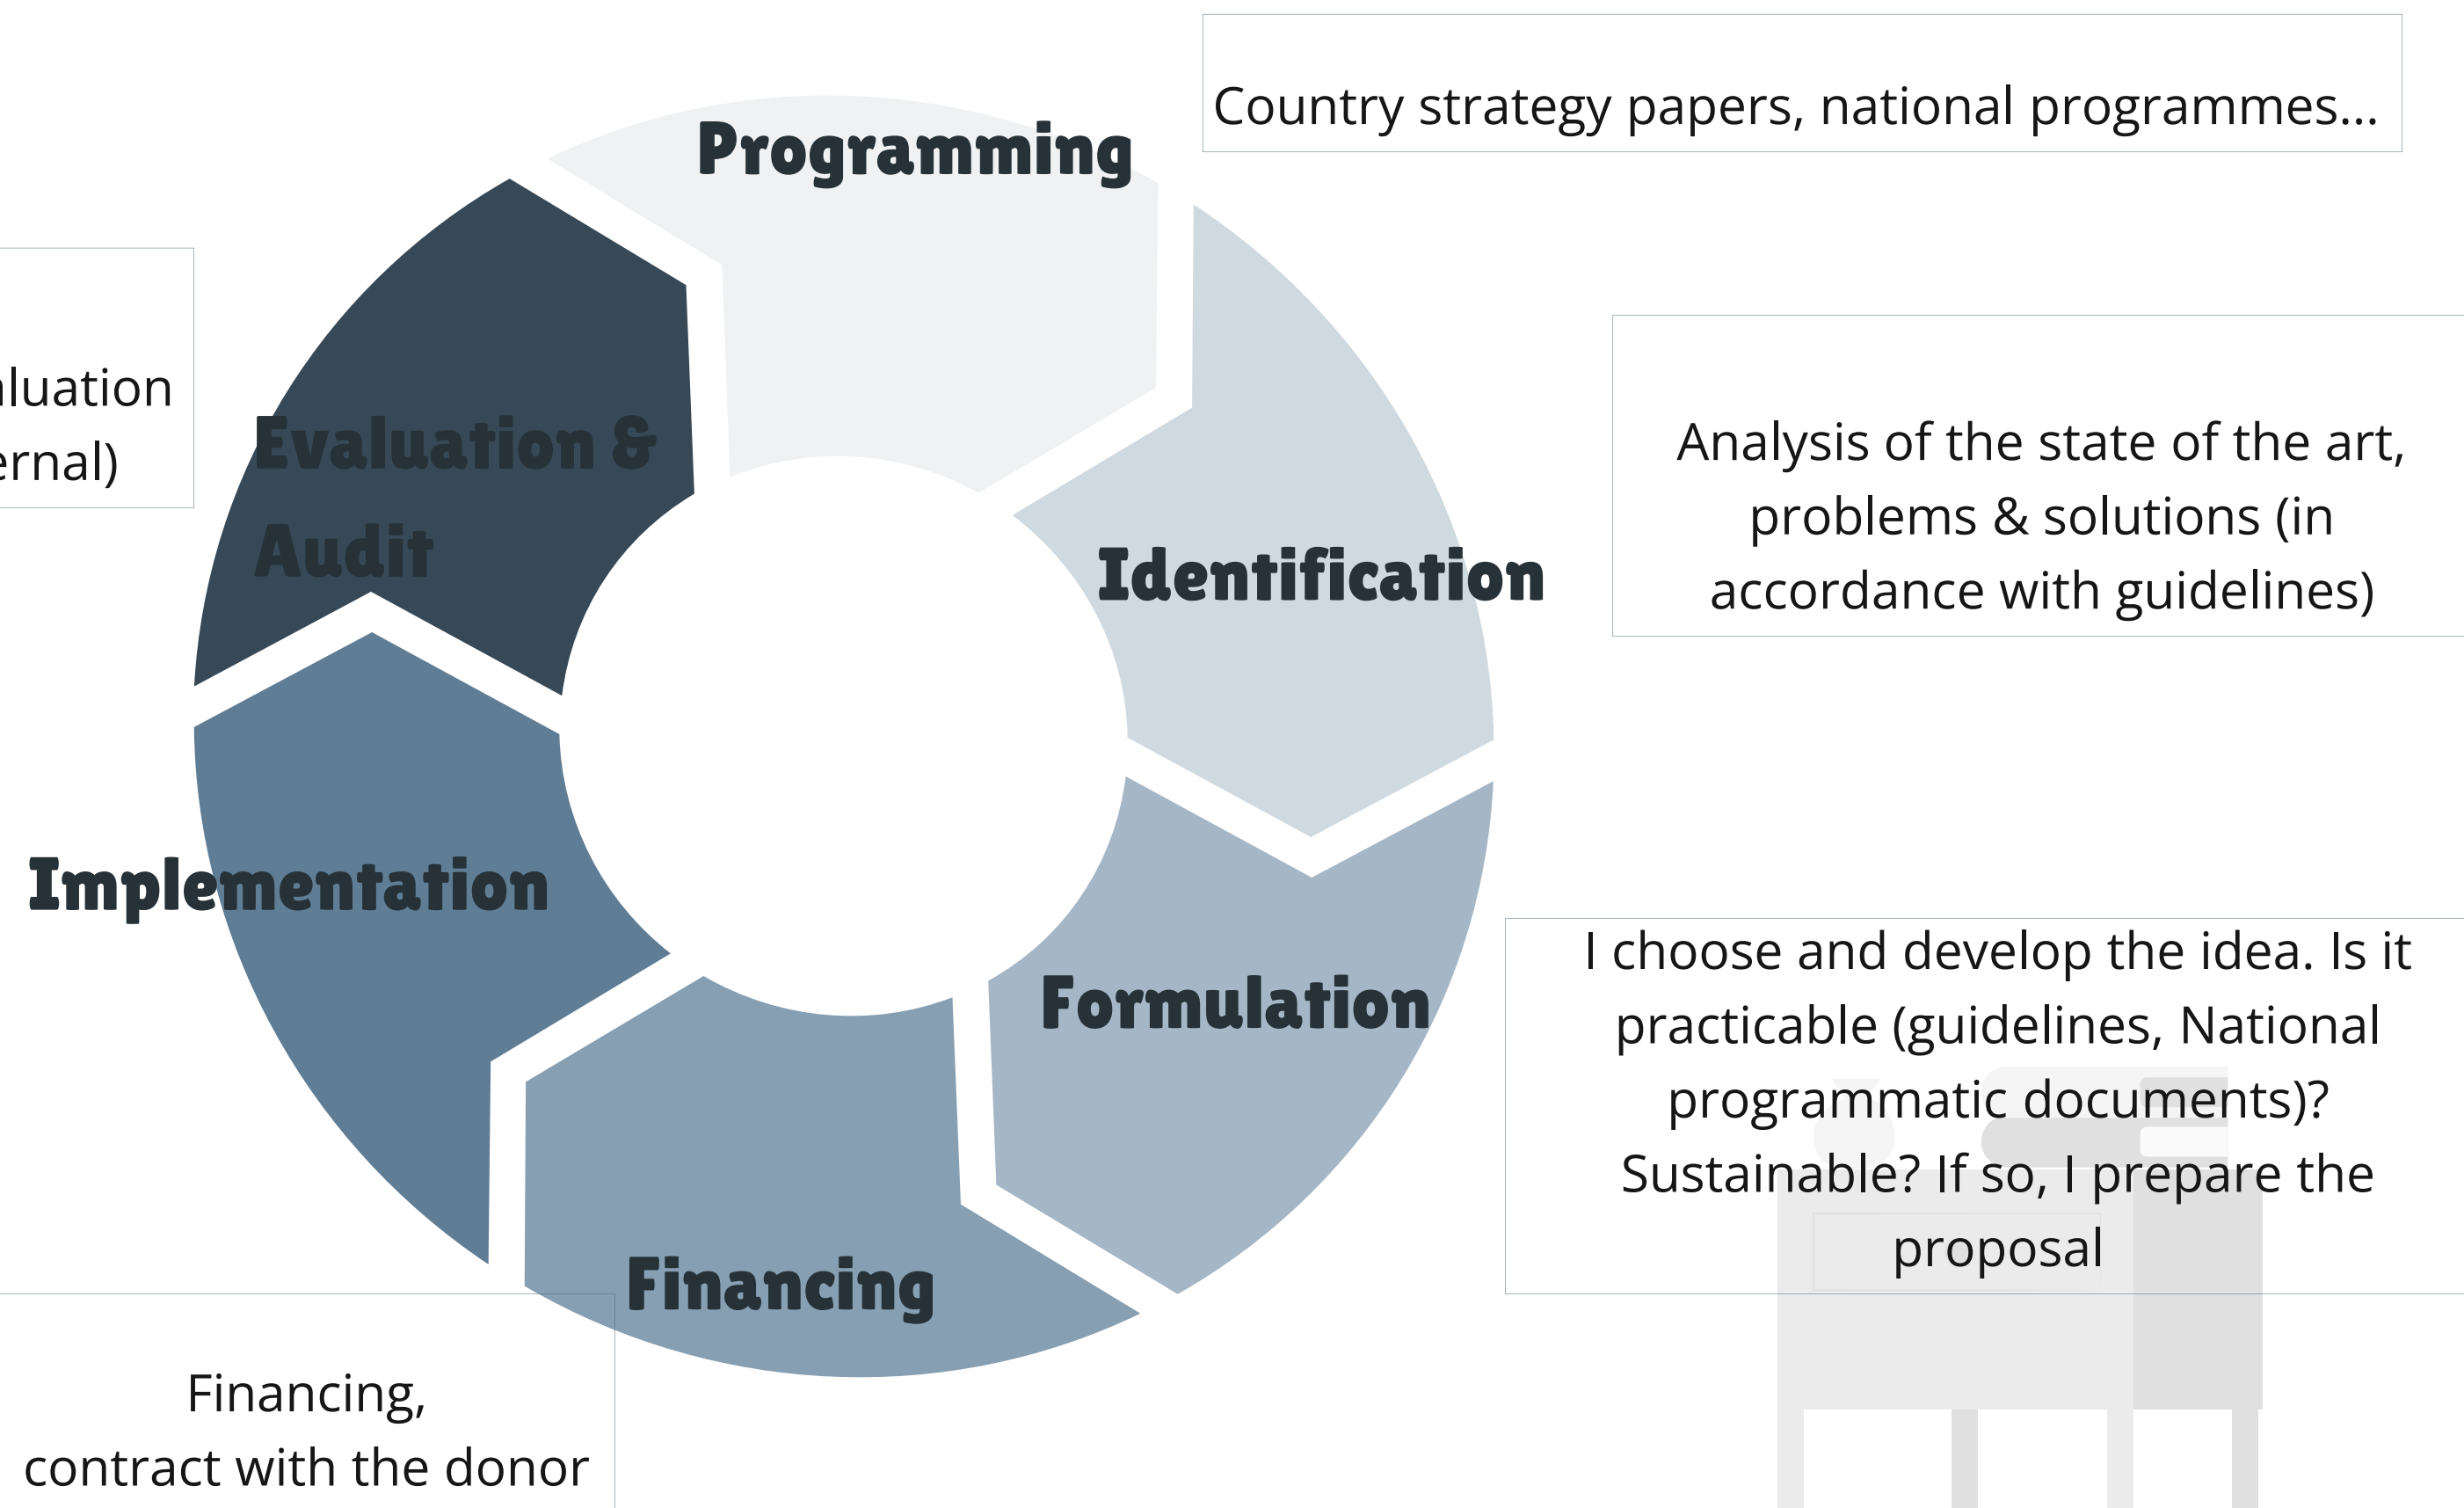

ABOUT THE PROJECT

- Unique
- That could present risks and unexpected events
- That in every phase should be exposed to critical evaluation
- That foresees a coordinate set of linked actions

**That is why we talk about CYCLE of a
project...**

THE PROJECT CYCLE

So...how do I approach a project?

THE PROJECT LOGIC:

the logical framework approach (LFA)

1. ANALYSIS

Analysis of the current situation, the future situation to be achieved and possible solutions for obtaining it.

Objective

The project idea must be coherent with the analysis

2. PLANNING

Development of the project in the dedicated form.

Objective

To ensure the sustainability and feasibility of the initiative.

THE PROJECT LOGIC: LFA

1. ANALYSIS

Stakeholder analysis

- Stakeholders identification
- Analysis of their ability and expertise

Problems Analysis

- Problems analysis and their hierarchy

Objectives Analysis

- Identify the objectives starting from the problems
- Identify the means and actions to achieve the objectives

Strategies Analysis

- Identify the various strategies available to solve the problems

2. PLANNING

Developing the Logical framework matrix

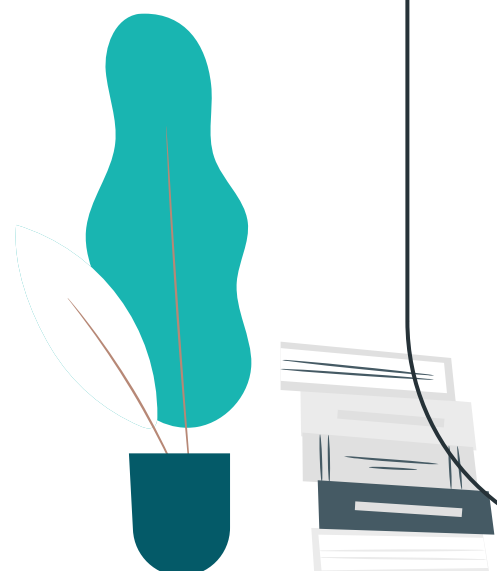

- Define the project frame
- Verify logic and risks
- Formulate measurable objectives

Activities plan

- Determine the sequence and interrelation of the activities
- Estimate the duration
- Allocate responsibilities

Resources Plan

- Develop a budget coherent with the business plan

THEORY OF CHANGE

Use of assets to
generate products and
services

ACTIVITIES

Behavioural change of
the target group: effect
gained in the
short/medium term by
outputs

MIDDLE-TERM EFFECTS (SO)

IMPACT (GO)

Long term change:
primary and secondary
effects produced by the
action but not during the
project life

INPUTS

Physical and financial
resources committed for
the activities

DELIVERABLES

Products, goods or
services resulting from
the activities
